

COMPLIES WITH:

- This system has been certified by IAPMO R&T against: ASSE 1086, NSF/ANSI 372, 42, 53, 58, 401, and Protocol P231 for the reduction of substances for specific performance claims as verified and substantiated by test data. Refer to the Performance Data Sheet for more information.
- EPA WaterSense®

Brizo Kitchen & Bath Company reserves the right (1) to make changes in specifications and materials, and (2) to change or discontinue models, both without notice or obligation. Dimensions are for reference only. See current full-line price book or www.brizo.com for finish options and product availability.

BRIZO

PRISTIVE™ TANKLESS REVERSE OSMOSIS SYSTEM

STANDARD SPECIFICATIONS:

- · For cold water installation only
- PRISTIVE™ Tankless Reverse Osmosis Water Filtration System offers 6 Stages of filtration using 3 cartridges:
 - Pre-Filter (BWQ300350) Recommended Lifespan 3,960 gallons or 6 years* whichever comes first
- Reverse Osmosis Filter (BWO300102) Recommended Lifespan - 1,320 gallons or 2 years* whichever comes first
- Carbon Filter (BWQ300202) Recommended Lifespan 1,320 gallons or 2 years* whichever comes first (Filter life dependent on usage)
- Optional 7th Stage of filtration using the remineralizer cartridge (BWQ300300) available for enhanced taste and pH balance
- · Key Specifications:
 - Feed Water Pressure: 20-80 PSI (0.14-0.6 MPa)
 - Feed Water Temperature: 41-100°F (5-38°C)
 - Daily Production Rate: 800 GPD (3028 L/day)
 - Rated Capacity: 1320 gallons (5000 Liters)
 - Rated Capacity: 1320 gallons (3000 Liters)
 Rated Filtered Water Flow Rate: 0.56 GPM (2.10 L/min)
 - System Efficiency Rating: 74%
- Certified reduction of more than 90 contaminants from drinking water when tested against NSF standards, including: lead, total PFAS, arsenic, bacteria, chlorine, chromium, copper, TDS, mercury, microplastics, pharmaceuticals, and heavy metals
- Tankless under sink installation and compact design
- 2.5 : 1 Filtered-to-waste ratio
- Integrated filter life tracking and leak detection
- Requires 120VAC power supply outlet
- Recommended installation with a Brizo Reverse Osmosis Beverage Faucet with integrated airgap
- For specific performance claims refer to the Performance Data Sheet section (page 2 and 3)
- Refer to the installation manual for more specific installation and electrical requirements

WARRANTY

- This Brizo[®] reverse osmosis system is warranted to the original consumer purchaser or commercial user, as applicable, to be free from defects in material and workmanship for the applicable period specified below:
- Reverse Osmosis Machine and Components: Five (5) years from the date the product was received by the original consumer purchaser or their authorized representative (installation contractor, etc.)
- Pre-Filter, Filter Cartridge and Remineralizer: Thirty (30) days from the date that the product is received by the original purchaser or their authorized representative (installation contractor, etc.)
- Please go to www.brizo.com for the complete details of our limited warranty.

55 E. 111th Street, Carmel, Indiana 46280 350 South Edgeware Road, St. Thomas, ON N5P 4L1 © 2025 Brizo Kitchen & Bath Company

PERFORMANCE DATA SHEET PRISTIVE™ TANKLESS REVERSE OSMOSIS SYSTEM*										
Model	Replacement	Operating Pressure Range	Operating Temperature Range	Efficiency Rating**	Rated Flow	Daily Production (DPR)	Rated Capacity			
BWQ1001012	BWQ300102 Reverse Osmosis Filter Cartridge BWQ300202 Carbon Filter Cartridge	20 - 80 PSI (0.14 - 0.6 Mpa)	41 - 100 ° F (5 - 38 ° C)	≥74%	0.56 GPM (2.10 L/min)	800 GPD (3028 L/day)	1320 Gallons (5000 L)			

to a concentration less than or equal to the permissible limit for water leaving the system, as specified in NSF/ANSI 42, 53, 58 and 401.

^{*}While testing was performed under standard laboratory conditions, actual performance may vary.

**Efficiency Rating means the percentage of the influent water to the membrane portion of the system that is available to the user as RO treated water when the system is operated without a storage tank or when the system is operated without a storage tank or when the storage tank or when the system is operated without a storage tank or when the storage tank or when the system is operated without a storage tank or when the system is operated with the system is operated without a storage tank or when the system is operat

a. As monochloramine (measured as CI2/L).

 $b. \ \ Reduction \ as \ calculated \ based \ on \ chloramine \ as \ the \ surrogate \ chemical.$

c. For PFAS, the individual influent tolerance is ±30%.

 $d. The test \ mixture for total PFAS is made up of PFOA (500 ppt), PFOS (1,000 ppt), PFHAS (300 ppt), PFNA (50 ppt), PFHBS (260 ppt), and PFDA (10 ppt).\\$

 $e. This effluent value is based on the MCLs or health advisories in force in several New England States for a total PFAS level of <math>0.02\,\mu g/L$

f. There is no rated capacity for microplastics due to the broad variation in the quantity of particulate matter found in drinkingwater.

g. This system has been tested for the treatment of water containing pentavalent arsenic (also known as As(V), As(+5), or arsenate) at concentrations of 0.30 mg/Lor less. This system reduces pentavalent arsenic, but may not remove other forms of arsenic. This system is to be used on water supplies containing a detectable free chlorine residual or on water supplies that have been demonstrated to contain only pentavalent arsenic. Treatment with chloramine (combined chlorine) is not sufficient to ensure complete conversion of trivalent arsenic to pentavalent arsenic. Rease see the Arsenic Facts section of the Installation Instructions for further information h. This system is acceptable for treatment of influent concentrations of no more than 27 mg/Lnitrate and 3 mg/Lnitrite in combination measured as N and is certified for nitrate / nitrite reduction only for water supplies with a

pressure of 210 kPa (30 psig) or greater.

i. This reverse osmosis system contains replaceable treatment components critical for effective reduction of TDS. The product water shall be tested periodically to verify that the system is performing satisfactorily.

j. This system is not intended to convert wastewater or raw sewage into drinking water.

a These harmonized values were agreed upon by representatives of U.S. EPA and Health Canada for the purpose of evaluating products to the requirements of this standard.

b Influent challenge levels are average influent concentrations determined in surrogate qualification testing.

c Maximum product water level was not observed but was set at the detection limit of the analysis.

d Maximum product water level is set at a value determined in surrogate qualification testing.

e Chemical reduction percent and maximum product water level calculated at chloroform 95% breakthrough point as determined in surrogate qualification testing.

The surrogate test results for heptachlor epoxide demonstrated a 98% reduction. These data were used to calculate an upper occurrence concentration that would produce a maximum product water level at the Maximum Contaminent Level (MCL).
